Delhi, India | george.jbv.2005@gmail.com | LinkedIn: [George Jibin Vergheese | LinkedIn](#) | GitHub: [29JIGOVE05 \(GJV_2005\)](#)

SUMMARY

Determined Computer Science undergraduate with great Python skills and hands on exposure in Data Science, Machine Learning, full stack web development, from Flask and MySQL to integrating APIs in my projects. Competent in leveraging object-oriented design and data structures to develop scalable applications and automate processes as well as integrating ML models into real-world applications. Interested in cloud-based SaaS applications and healthcare technology in addition to using AI for development.

TECHNICAL SKILLS

Languages: Python, Java, Javascript, MySQL

Python Ecosystem: Flask, NumPy, Pandas, Matplotlib, Seaborn, OpenCV, TensorFlow

Web and Full-stack Development: HTML, CSS, RESTful API, responsive UI development

Tools: Git, GitHub, VS Code, PowerBI, Tableau, Streamlit

Fundamental Concepts: OOP, Data Structures & Algorithms, Database Management System, OS, Software Engineering concepts, Agile/Scrum

Areas of Interest: Data Manipulation, Data Visualization, Machine Learning, AWS Cloud Technologies (basic), Automation testing, AI-driven programming tools (for example, GitHub Copilot, Claude, ChatGPT), Prompt Engineering

PROJECTS

Smart Housing System - Python, OpenCV

- Developed a smart house management system using AI techniques such as computer vision, machine learning, security monitoring, and home automation using a Python/Kivy application.
- Used a Siamese neural network for facial verification and emotional/ aggression detection using Tensor Flow / Keras, OpenCV, and MediaPipe for intelligent security monitoring achieving 85% accuracy.
- Designed intelligent security systems like intruder detection, motion-based control of appliances, temperature control, and security notification systems using OpenCV, MQTT, and Pushbullet.

Smart Waste Management System - Python, Flask, TensorFlow, MySQL, JavaScript

- Developed a web application that used MobileNetV2 to identify whether an uploaded image was biodegradable waste, non-biodegradable waste, or medical waste with averaged confidence scores.
- Enabled location detection via GPS and generation of unique ID for each report to allow traceability throughout the process and communication with the relevant authorities.
- Used SMTP emails on submission of reports and saved all information in a MySQL database via a Flask front end.

Predictive Analytics System for Opportunities on Website Development - Python, Pandas, Numpy, Scikit-learn, Google Places API, Power BI, Streamlit

- Analyzed over 10000 business records from 35 different parts of Delhi through the Google Places API and carried out data cleaning and preprocessing activities along with exploratory data analysis (EDA).
- Developed a Random Forest Machine Learning model to predict whether the company without a website will develop a website or not depending on some factors like ratings, reviews, business category and pricing.
- Conducted feature engineering activities and created visualizations of data to reveal the trend in the business attributes that will guide lead prioritization and business recommendations.
- Created an interactive Power BI dashboard and also deployed a Streamlit application for visualization of opportunity score and business insight generation.

EDUCATION

B.Tech in Computer Science - VIT - Expected Graduation: 2027

Relevant Coursework: Data Structures and Algorithms, Software Engineering, Database Management Systems, Web Technologies

CERTIFICATIONS

- Generative AI Mastermind - Outskill
- Bits and Bytes of Networking - Google
- Python for Machine Learning - Udemy
