SUMMARY

Aspiring **Data Scientist** with hands-on experience in **machine learning**, **computer vision**, and **data preprocessing** using **Python**. Proven ability to build end-to-end prototypes involving data collection, model logic, and evaluation. Strong foundation in statistics and ML concepts.

TECHNICAL SKILLS

- **Languages:** Python, SQL, Java
- **ML & Data Science:** Pandas, NumPy, Scikit-learn, OpenCV
- **Visualization:** Tableau
- **Tools:** Git, GitHub, Jupyter Notebook
- **Concepts:** Machine Learning, OOP, Probability, Statistics

PROJECTS

Smart Housing System - ML & Computer Vision (Python, OpenCV)

- Built a **face recognition** pipeline using OpenCV, achieving **95% accuracy** in controlled environments.
- Designed a rule-based aggression detection module to flag abnormal behavior in real-time video feeds.
- Integrated automation logic for environmental controls, simulating data-driven temperature and lighting optimization.

Smart Waste Management System - (Python, Flask, TensorFlow, MySQL, JavaScript)

- Developed a full-stack web app using **MobileNetV2** to classify waste (Biodegradable, Non-Biodegradable, Medical) from image uploads with averaged confidence scoring
- Integrated **GPS-based location capture** and auto-generated unique tracking numbers for each report, enabling traceability and follow-up with concerned authorities
- Automated **SMTP email alerts** post-submission with waste type, confidence scores, and coordinates; persisted all data in a **MySQL** database with a responsive Flask frontend

Sentiment Analysis with N-Gram Analysis (Python, NLP, Pandas, Matplotlib)

- Performed **sentiment polarity analysis** on review data with text preprocessing — lowercasing, punctuation removal, and contraction expansion — using NLP techniques
- Conducted **N-Gram analysis** (unigrams, bigrams) on reviews to identify frequently co-occurring word patterns and extract contextual sentiment signals
- Visualized sentiment distributions and token frequency trends using **Matplotlib/Seaborn** to derive actionable insights from textual data

EDUCATION

B.Tech in Computer Science - VIT

Graduation: 2027

Relevant Coursework:

Probability & Statistics, DBMS, Data Structures, Software Engineering

CERTIFICATIONS

- Python for Machine Learning - Udemy
 - Deloitte Data Analytics Job Simulation
 - Generative AI Mastermind - Outskill
-
